

# \$VTN LITEPAPER

## WHAT IS

# VOTTUN?

Vottun has created an ecosystem that allows any Web2 company or developer to easily create, interact with, and manage various DApps through our APIs, without requiring advanced knowledge of blockchain programming.

Over the past 5 years, we have worked in a B2B capacity with over 200 Web2 companies taking their first steps into Web3, receiving more than 45 awards and recognitions that attest to our effort and dedication as a startup.

Now, we have decided to open our platform to everyone so that any programmer can benefit from our technology and accelerate the creation and adoption of blockchain solutions by companies.

Therefore, we are building an ecosystem powered by the \$VTN token where developers can create DApps, while simultaneously forming a community that plays a part in the transition from Web2 to Web3 in society.

## BACKED BY

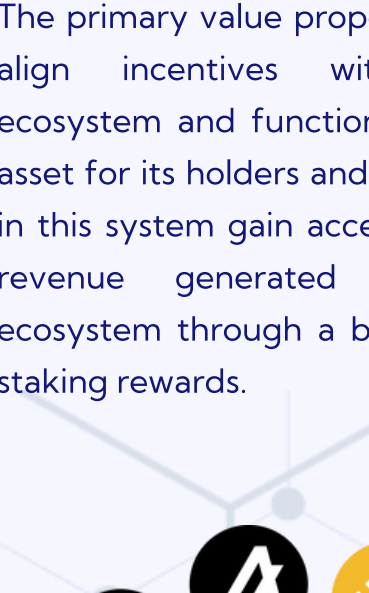

Vottun received over \$2,5M from relevant investors and blockchain network foundations.

Awarded and Media Apparences Vottun received over 45 techical awards, being chose as Top Hot 100 Startup by Wired in 2022 And appears in hundreds of influential media publications.

## \$VTN VALUE PROPOSITION

\$VTN stands at the core of the Vottun ecosystem, serving as the primary currency for transactions within a vibrant community that unites developers, service providers, and users in the realm of web3.

### How \$VTN accrues value

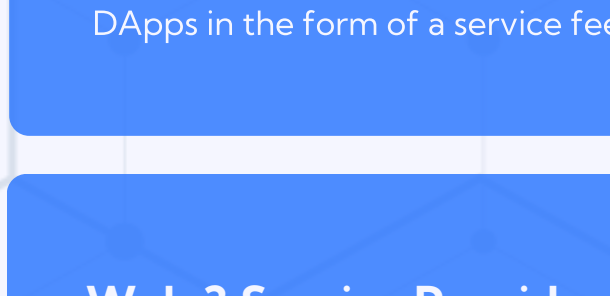

The primary value proposition of \$VTN is to align incentives within the Vottun ecosystem and function as a yield-bearing asset for its holders and stakers. Participants in this system gain access to a share of the revenue generated on the Vottun ecosystem through a burn mechanism and staking rewards.

### Blockchain agnostic token

At the core of the Vottun ecosystem, the \$VTN token plays a crucial role as the 'layer of value' that extends across individual blockchains.

In other words, the Vottun ecosystem can be built on top of any blockchain. Therefore, \$VTN holders don't need to worry about whether the future of the web 3 will be on, for example, Ethereum, Solana, Cosmos, or all of them simultaneously.

## PROTOCOL ECONOMY

Uses of \$VTN and ecosystem participants:

### Developers

Developers build DApps using the Vottun APIs. They must lock \$VTN tokens to receive rewards for the use of their DApps. The higher the stake, the greater the tier and rewards. Developers receive compensation for the usage of their DApps in the form of a service fee.

### Web 3 Service Providers

Web 3 service providers must lock \$VTN tokens to be able to offer their services on the Vottun ecosystem. The higher the stake, the greater the tier. DApp developers pay these service providers to empower their applications.

### DApp Users

Users will need \$VTN to make use of the DApps. A large percentage of the fees paid by the users goes to the developers of those DApps. The rest goes to the Vottun Treasury, burned to make \$VTN deflationary and distributed as yield to \$VTN stakers.

### Community (\$VTN Stakers)

\$VTN holders can lock in \$VTN to receive staking rewards. Initially, these staking rewards will come from \$VTN emission, but as more DApps are created in the Vottun ecosystem, and more users pay fees for the usage of these DApps, a percentage of those fees will be given to \$VTN stakers in the form of real yield.

## HOW \$VTN ACCRUES VALUE

The following details the two mechanisms designed for \$VTN to capture long-term value: token burning and real income streams.

### The burn

10% of the revenues generated through user transactions on the Vottun ecosystem will be used to purchase \$VTN in the market and "destroy" it by sending it to a burning wallet. This action transforms \$VTN into a purely deflationary asset (once the entire token supply is released).

### Staking Rewards (Real yield)

The Real Yield refers to a staking rewards model. Unlike traditional staking models where rewards come from additional token issuance, thereby diluting its value, with Real Yield, staking rewards are generated from a real income stream derived from a percentage of each transaction within the Vottun ecosystem. Instead of relying solely on the creation of new tokens, it aims for a more sustainable model linked to the economic activity of the platform.

## DISTRIBUTION OVERVIEW

We aim to maximize the decentralization of the Vottun ecosystem, which is why we have opted to allocate nearly half of the token supply to the community. This will be distributed through various initiatives such as protocol incentives and airdrops.

### Token Allocation (%) by Category

625M Total Supply

## VOTTUN ECOSYSTEM

Many brands trust Vottun, and our ecosystem is growing every day. A larger ecosystem implies more developers; more developers mean more apps. These apps attract more users, and increased user activity results in more revenue for \$VTN holders.

## ROADMAP

### Q1 2024

Expanding our community with challenges within the Vottun Journey, including hackathons, workshops, and numerous activities with great rewards.

### Q2 2024

We implement new features for developers and the Vottun community: a universal payment wallet, a new token launch suite... All of this as a prelude to the token launch.

### Q3 2024

The moment has arrived! It's time to empower our Web3 Ecosystem with our token and create community dynamics and marketing actions to scale up our Web3 Economy.

### Q4 2024

The next step for \$VTN: we are launching staking and other rewards for \$VTN holders. It's time to enjoy the benefits of having trusted the vottun ecosystem.
